There's always more to learn, so what would be some interesting next steps to take *apart* from improving your Flask skills further?

What To Learn Next

Here are a few of suggestions to further expand your skill set.

More Back-End Development with Django

You've learned Flask, but what about another Python web framework? **Django** is extremely popular as well, and it approaches web development in a different way than Flask does. Django is considered to be a more "boilerplate" framework. This also means it's well-suited for rapid development, so you won't have to deal as much with installing external packages to build up the functionality you want.

In other words, Django's "batteries included" approach is a good choice for complex projects that need to be built quickly, but it's not quite as flexible as Flask. It is still very much useful to explore if you are serious about web development using Python.

Additional Resource

Now that you're comfortable with Python and Flask and ready to take on the next challenge, learning Django is an excellent and logical next choice.

CodingNomads Django Course

Front-End Web Development with JavaScript

The modern web relies heavily on **front-end** code written in JavaScript. If you feel comfortable with Python and Flask and ready to take on the next challenge, then this is a good way to diversify your web development skill portfolio with more front-end skills.

Additional Resource

Improve the user interface of your projects and become a full-stack developer by adding JavaScript skills to your quiver.

CodingNomads JavaScript 101 Course

Data Science & Machine Learning

As a solid back-end web framework, you can use Flask as a base to build and run many data science applications, and be able to quickly present them to a world-wide audience.

Additional Resource

If you are interested in honing your AI skills, check out our courses in Data Science & Machine Learning, and Deep Learning.

Job Preparation

Your next step might be that you're looking to earn some money with your new Flask skills. If you want to get serious about building your profile as a freelancer or landing a new job as a software developer, consider CodingNomads Career Coaching. The program helps you make the right decisions and get in the game well-prepared.

With all these options, you are certainly in good hands! We want to say thanks for sticking with us all the way through this course and we hope you had a fun and productive time learning Flask.

Say hi and stay in contact over on Discord. All the best, and keep learning! :)
